Notification to All Public and Institutions

As the summer season approaches, it is crucial to address potential risks posed by trees that may lead to disasters or accidents. We kindly urge all public and government institutions to conduct an immediate assessment of trees surrounding your premises and surrounding areas. This is to ensure that any trees posing an imminent threat to safety, such as those at risk of falling or causing obstruction, are identified and appropriately cut down before the onset of the summer.

In the interest of public safety and to mitigate potential hazards, we request that you process the necessary actions with the Environmental Section under Samdrup Jongkhar Thromde. The Sanitary Inspector, Sonam, is available at mobile number **17938744** to provide guidance and support.

Your prompt attention to this matter will greatly contribute to reducing the risk of potential disasters and safeguarding our community.
